Full original(s)
Full common theory
Complete application(s)
A: Supported kernels and finite two-groups
1.571×
B: Coset geometries and symmetric group markings
1.094×
C: Chamber operations and binary translations
1.292×
D: Stabilizer actions and geometry enumeration
1.053×
E: Projective groups and string markings
1.816×
F: Odd kernels and tight hypertopes
1.264×
G: Linear spaces and incidence residues
0.630×
Affine: Affine groups and lattice quotients
0.786×
Represent.: Realizing groups as geometry automorphisms
1.015×
Chamber: Chamber systems and regular covers
0.982×
Matching: Matching extensions of centrally symmetric polytopes
1.119×
Chiral: Complete enumeration of chiral polytopes
0.925×
Diagonal: Orbit and semidirect constructions
1.129×
Gluing: Common point gluing and synchronized trees
0.677×
